*Adjustment Package for Dispensing*

# The same software for all your settings!

We combined the camera, laser displacement sensor, and needle adjuster for precision dispensing on fine workpieces with the highly rigid, high precision JR3000 Series to create a comprehensive machine vision system package. What's more, our dedicated software, "JR C-Points II" is even more user-friendly. Now anyone can do perform precision robot teaching using the camera images.

## Easy settings from start to finish with our specialized software

### Auto Calibration

Capture the purged dispensing agent and the camera calibrates automatically. (Line up the needle position with the cross to capture with the camera.)

### Easy Teaching

Teaching is done in JOG mode. Use the camera images to move to the location and then choose the icon for the operation you want.

## Adjustment functions for high precision dispensing

### 1 Camera Adjustment

The robot dispenses while making adjustments on displaced workpieces.

### 2 Continuous Height Adjustment

The laser displacement sensor continuously measures the workpiece height.

### 3 Needle Adjustment

If the needle tip position is displaced after nozzle replacement, the robot automatically detects the current needle position and makes adjustments.

## <Notes>

- \*1 For Dispensing with Camera Specifications, all robots are double column types.
- \*2 Maximum speed can vary depending upon conditions.
- \*3 Repeatability was measured at a constant temperature and does not represent a guarantee of absolute precision.
- \*4 Point data memory capacity reduces as additional function data settings/point job data/sequencer data are added, due to the shared data storage area.
- \*5 Values are for robot with peripheral devices attached.
- \*6 We ask that customers please prepare the PC (and connecting cable) and dispenser at their end.
